ABSTRACT OF THE DISCLOSURE

A wrench includes a main shaft having a working portion provided at the top thereof; a torsion member having an elastic restoring force against torsion about the axis of the main shaft; at least one operating handle disposed so as to intersect with the middle of the main shaft; and torque display means for displaying a torque produced in accordance with the degree of twist of the torsion member with respect to the reference point of the same. The main shaft is dividable into two divided bodies in the axial direction thereof, and the two divided bodies are connected to each other, having the torsion member interposed therebetween, so as to be turnable relative to each other about the axis of the main shaft. With this wrench, a screw is quickly sent to its seating position and is then fastened with up to a predetermined torque.
